## SPINDLES MADE EXCLUSIVELY FOR THE STONE INDUSTRY!

In addition to the specially designed HSE series, Dynamax's HSM, HSS and High Speed spindles are well suited for the stone industry.

### HSE Spindles Offer:

- ▶ Additional levels of corrosion protection to enhance spindle's longevity
- ▶ Air purge and labyrinth sealing to minimize threats of contamination
- ▶ Integral motor design to provide optimal performance for wide variety of applications
- ▶ Ceramic bearings to extend life and allow higher speed operation
- ▶ Water cooling to extend spindle life
- ▶ An automatic drawbar for quick tool change
- ▶ Available customization options to further enhance performance and allow ease of integration into existing machinery

Dynamax is proud to announce it's newest spindle line designed exclusively for stone fabricators. The new HSE line was created to meet the needs of the stone industry. Offering manufacturers an alternative to costly foreign spindles, the HSE line was developed to cut the toughest of stone, in the harshest environments.

Having engineered hundreds of spindles over the years, the Dynamax engineering team created the HSE line to answer stone manufacturers demands for spindles with longer lives. Analysis of stone cutting spindles sent in for repair told us our line would need to protect against corrosion. In addition to extra corrosion protection, Dynamax's HSE line was designed to protect the spindle from processed stone debris attaching to its body, hindering peak performance.
